

Allied Digital's US subsidiary, En Pointe Global Services to incorporate the all new 2010 Intel® Core™ vPro™ processor family into its IT service offerings

Los Angeles, California, February 4, 2010 -- En Pointe Global Services (EPGS), a leading provider of managed IT services, will keep its clients on the forward edge of business computing performance, manageability and security: the company has announced that it will introduce the all new 2010 Intel® Core™ vPro™ processor family into its wide-ranging customer solutions.

EPGS will integrate Intel's latest generation of intelligent business platforms to take advantage of the virtualization and automation features of Intel vPro processor technology, offering remote IT asset management that minimizes deskside visits while enhancing security and customer productivity.

Buyers of IT products as well as En Pointe Global Services' managed service customers will receive PCs and notebooks featuring Intel® Core™ i7 and i5 processors. These systems automatically adapt to each user's individual needs to speed up when multitasking. Intel® TurboBoost technology and Intel® Hyper-Threading technology enable users to remain productive even while running security and other background tasks.

Through PC Fleet Management, end-user customers will enjoy the smart security of enhanced data protection from viruses and attacks through AES Encryption acceleration and Intel Remote Encryption Management technology. What's more, notebooks protected by Intel Anti-Theft technology automatically sound an alarm and disable the unit if anyone attempts to move them. (Improved recovery features also make it easier for authorized personnel to safely restore locked devices.)

All-new 2010 Intel Core vPro processor technology will enhance En Pointe Global Services' managed service offerings, enabling IT personnel to remotely configure, diagnose, isolate and repair infected PCs – even when those units are unresponsive – to help customers control management costs, protect data, work more efficiently and remain productive.

"Intel's new business platform is absolutely the best direction we could have hoped for," said Kevin Schatzle, president of En Pointe Global Services. "For system buyers and managed IT service customers alike, Intel Core vPro processor technology makes it easier than ever to deploy exciting new levels of performance, security and manageability."

En Pointe Global Services, LLC, is an IT solution and outsourced managed services provider to commercial enterprises, government agencies and educational institutions nationwide. En Pointe Global Services (EPGS) enables its customers to reduce their total cost of ownership and improve end-user support through a broad catalog of service offerings.

En Pointe Global Services is a joint partnership between Allied Digital Services, Ltd and En Pointe Technologies, a value-added reseller that provides its customers with complete technology solutions, including hardware products, software licenses, and IT services, including:

- Direct online access to a \$2 billion inventory of mainstream PC hardware, office supplies, peripherals, accessories, and software
- Real-time links to more than 40 supplier warehouses nationwide
- Optimized shipping via dozens of distribution points
- Dedicated account management and support teams
